**Hi, I'm Hemanth. I communicate with
Machines using Code and to Humans using
Machines.**

<https://hemanthx.netlify.com>

Hi, I'm Hemanth.
I communicate with Machines
using Code and to Humans using
Machines.

**You won't see a
loading screen ever.**

Built on top of:

ReactJS

Gatsby

TailwindCSS

Storybook

And there's a secret feature 

...And you can **install** it on your device.

Seems supernatural right? I've written code for the **browser**... but you can install it on your phone like an **app**?

My portfolio is a Progressive Web App (PWA).

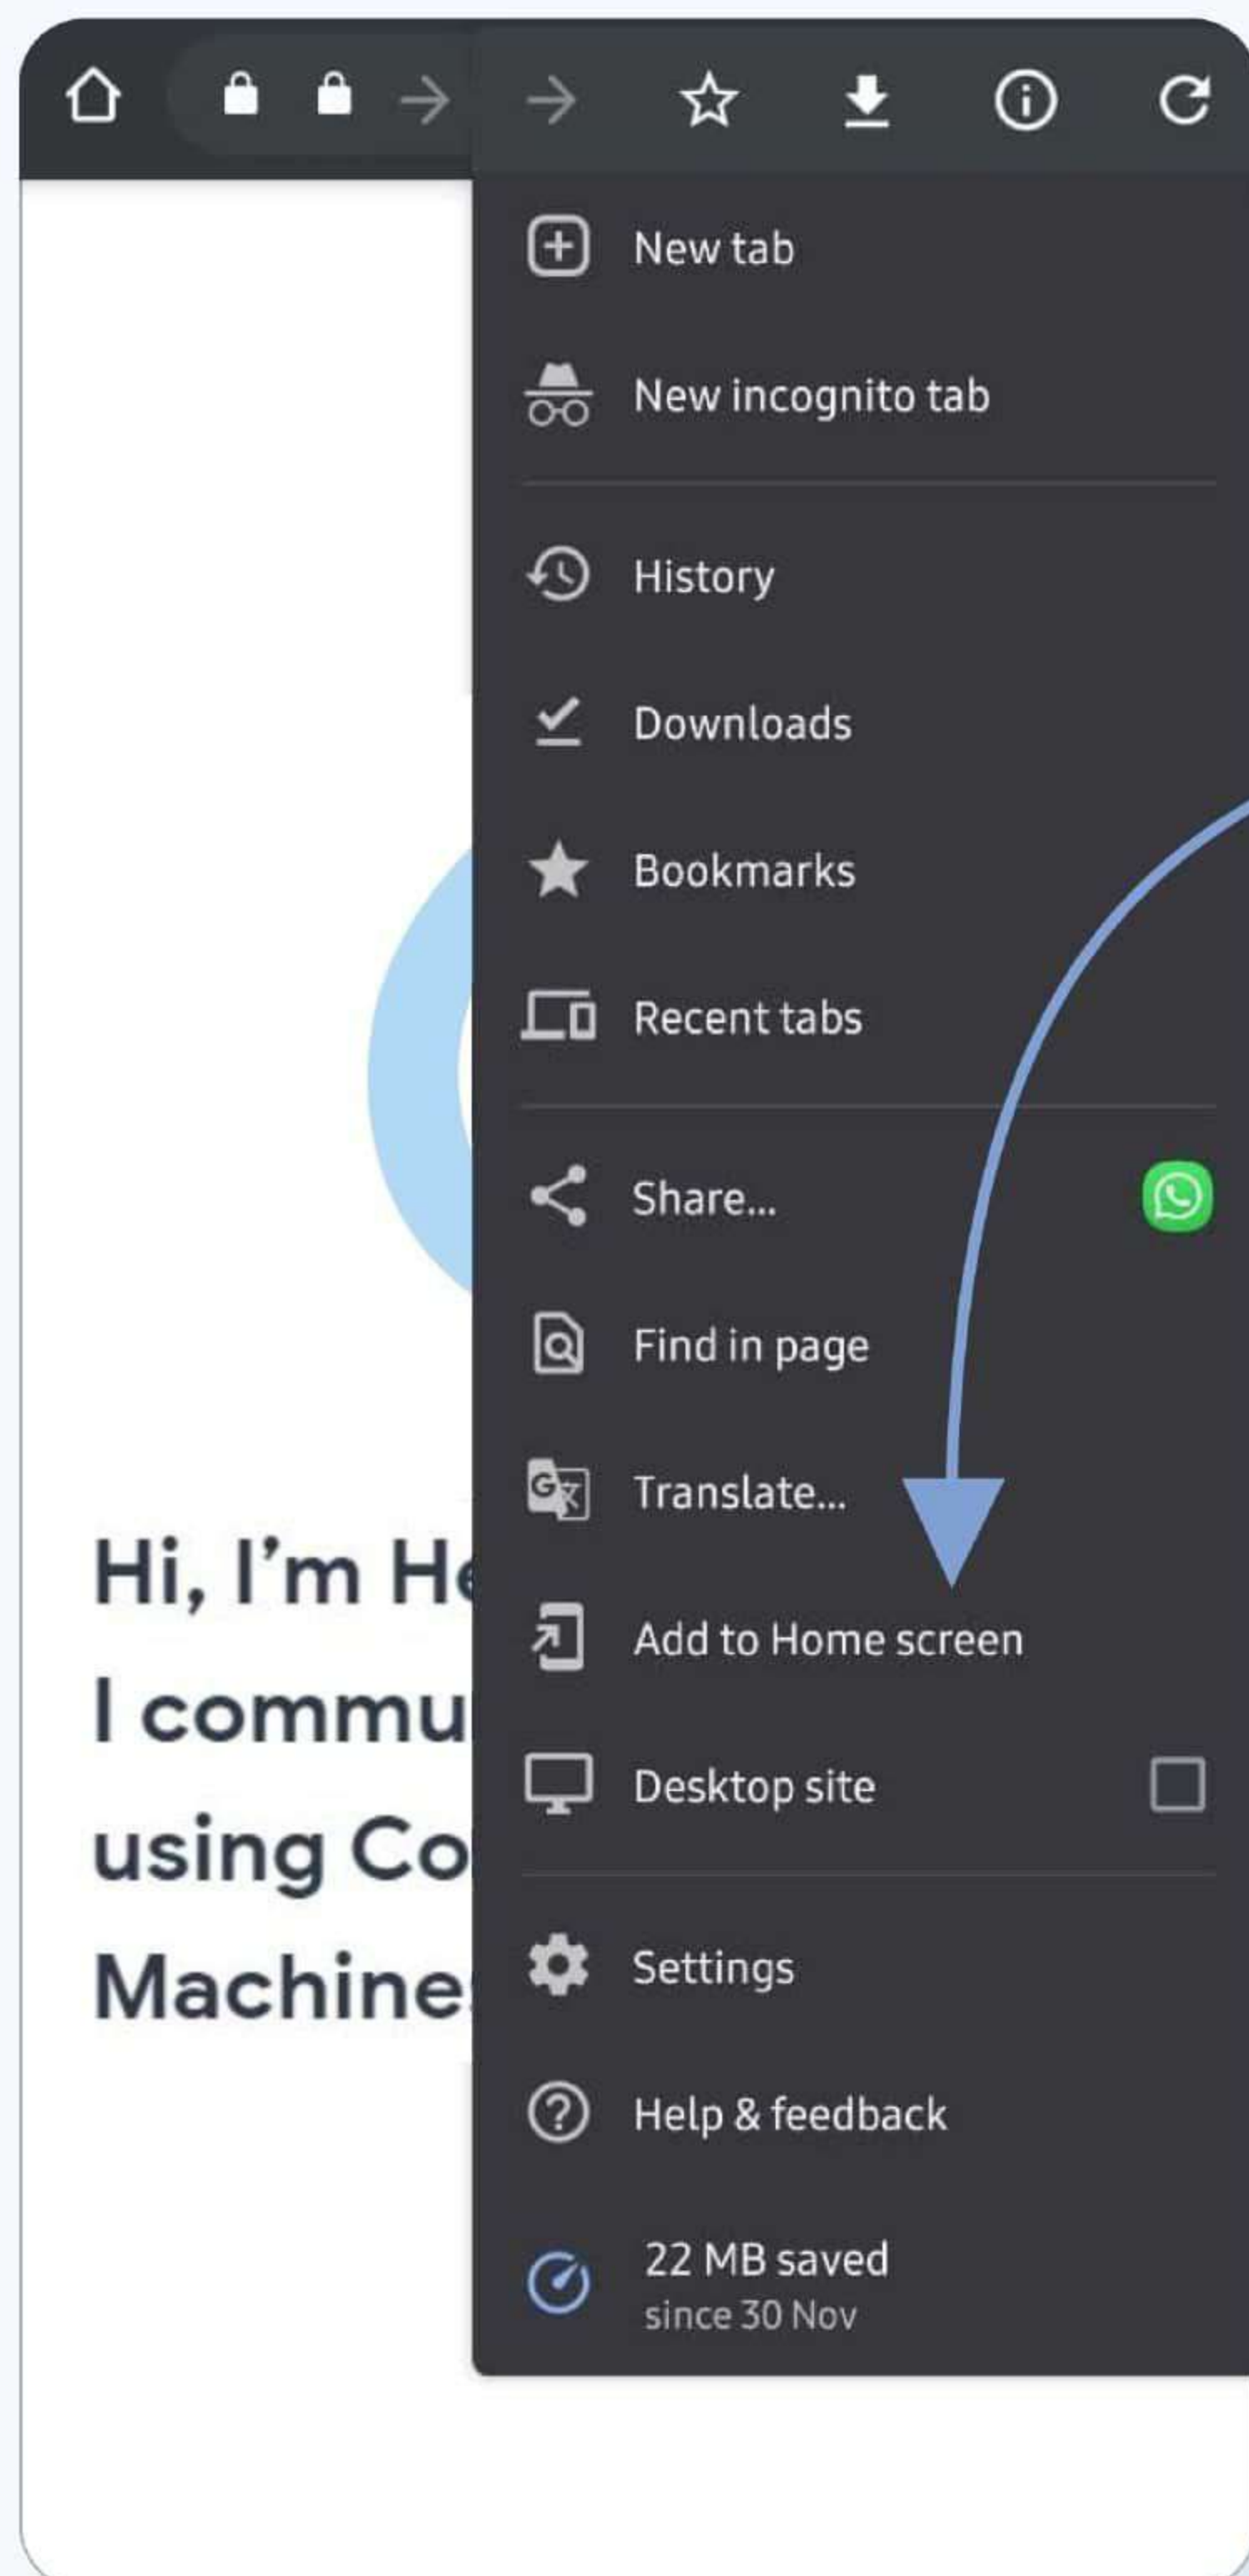

Put it simply, Progressive Web Apps are web applications that load in a web browser just like web pages or websites.

It feels like a native app and offers the same experience as a native one. There is no need to download it from an app store. It loads, runs, and functions in a web browser.

Examples of a few PWAs: Twitter Lite, Starbucks, Uber Lite

Here's how to install it

Step 1

Open hemanthx.netlify.com on chrome

Step 2

Click on 'Add to Home screen'

And you're set.

Pull to reveal the dark mode
